ZIP Roller Blind Measuring Guide

For ZIP screen blinds installed in a window recess

Accurate measurements are essential to ensure your ZIP roller blind fits correctly and can be installed safely. Follow the guide below and enter all dimensions in millimetres.

Front view – ZIP roller blind in window recess

Measurements are taken on the outside of the window within the recess.

A — Width

Measure the recess width in 3 places and use the smallest measurement.

B — Height

Measure the recess height in 3 places and use the smallest measurement.

C1 / C2 — Visible side fixing area

Measure the visible frame or fixing area on both sides. If either side is less than 25 mm, installation may not be possible.

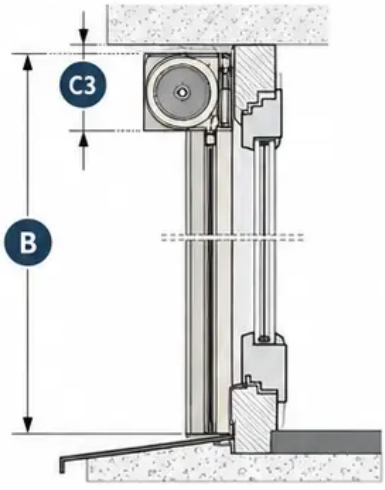

C3 — Top fixing area

Measure the available fixing area at the head.

All dimensions must be entered in millimetres.

If the opening is uneven, always use the smallest measurement.
